

The Natural Living Show

Local Sustainable Living

This event at The Altamont Fairgrounds is using wind-generated Renewable Energy Certificates to offset a portion of their electricity usage.

This commitment will allow 20 MWH of wind energy to enter into the national electricity grid on June 2 and June 3 2012.

The estimated environmental benefit resulting from 100% commitment to emission-free energy in the form of national wind is equivalent to preventing the release of 13.8 metric tons of CO₂ into the atmosphere¹. This is comparable to taking 2.7 cars off the road or planting 2.9 acres of pine or fir forest.

The Renewable Energy Certificates are supplied by leading renewable energy marketer and developer Community Energy.
